

PHILOSOPHY OF TECHNOLOGY

The single most important factor in determining the success of technology in the classroom is a teacher who is comfortable with and knowledgeable about computers.

By insuring equitable and efficient use of existing and emerging technologies, the Irving Independent School District will prepare students to be productive citizens of an increasingly complex information society.

To realize this philosophy:

- **Technology will be pervasive in every classroom and integrated throughout the curriculum;**
- **Teachers and students will be provided with current technologies that make learning interesting, motivating, and relevant to the real world;**
- **Teachers will be prepared to use technology as a tool for learning, teaching, and managing.**
