

### **Addendum #3 for CSP 10-21 Playground Equipment and Installation**

On Page 41 of 56, lines 33, 34, 35 should be deleted.

Any vendor will be considered and the Playworld specifications are only to illustrate the quality. The specification listed with any company brand name may be complied with as an equal product or superior from another manufacturer.

However, the specifications are firm as to engineering specifications and any other vendors submitting a proposal, must clearly show that each specification is equal or superior in their proposal for their product. Failure to acknowledge full and exact compliance with the qualitative specifications will render the proposal unresponsive and it will not be considered.

Example:

The materials specifications on Page 41 of 56 of the CSP document must be equal or superior to those listed. Vendor must show how their product meets each and every one of those specifications.

Design styles of the components (slides, ladders, etc may vary but must be in general compliance with the needs illustrated. These play components are what has been deemed best for our students.

**Proposals must not be bound; 3 hole punch and 3 ring binders are acceptable**
